DIEGO DÍAZ MARÍN
FRONT-END WEB APPS DEVELOPER

+2 years experience as Web Apps Developer. Undergraduate student at the University of Magdalena. Passionate for minimal design, development, customization and web techs.

MOST RECENT WORK EXPERIENCES

Jr. Mobile App Developer at Único Logística

January 2022 - Present [Buenos Aires, Argentina][Shipping Service for Companies. B2B]

RESPONSIBILITIES

- Design all the screens that appear in the application, applying knowledge of UX and UI.
- Develop API for client-server communication. implement password encrypt, database management (MongoDB) and error handler (HTTP status code). Use jwt token and cookies to handle user sessions.
- Develop a mobile app using React Native to automate the processes that are carried out internally in the company.
- Configure the cloud service (deno deploy) to use the mobile application in production. Implement Expo Application Services (EAS) to management/create updates and production builds.
- Implement a billing system in pdf format that allows end users to share the file between different mobile applications.
- Develop websockets for real-time client-server communication. Create a security layer to handle each user's role permissions.

KEY ACCOMPLISHMENTS

- Improved the company's internal management times thanks to the implementation of websockets that allow real-time updating of application information.
- Increased the number of services received by the company thanks to the implementation of a generic and easy-to-fill form that allowed improving the time it took to capture the information required to perform the service.
- Improved the employees efficiency by reducing service cycle time from 7 to 3 days,using real-time updates on the mobile app.

Front-end Developer at estuarg.com

June 2021 - December 2021[Buenos Aires, Argentina][Academic Consulting Agency. B2C]

RESPONSIBILITIES

- Design the web page using Figma and create necessary files and assets to share with customers.
- Create the web page using Next.js and TypeScript.
- Deploy git project in Vercel platform, configure domain and DNS.

KEY ACCOMPLISHMENTS

- Improved website load times compared to major competitors due to the implementation of a minimalist design..
- Increased the number of views and average time spent on the page by 75% according to Google Analytics data due to the redesign of the page and the implementation of easy-to-read fonts.
