Diego Díaz

Senior Software Engineer | Full Stack | TypeScript, React & Next.js

Colombia (UTC−5) · Remote

diegoddiaz05@gmail.com · dieco.dev · github.com/diecodev · linkedin.com/in/diecodev

SUMMARY

Full-stack engineer building production applications with TypeScript, React, Next.js, and Node.js. Sole engineer of Echo, a macOS meeting recorder with on-device transcription and summarization. Helped build the campaign hub promoted by PMG's full-page ads in **The Wall Street Journal**, cut PMG Hub search-page JavaScript from **327 kB to 165 kB**, and reduced Next.js build times by **45%** at Viewstats. Contributed merged fixes to Qwik's Vite optimizer and Supabase integration; maintain two published Qwik libraries. Deliver UI architecture, authentication, APIs, databases, and deployment.

OPEN SOURCE & FRAMEWORK CONTRIBUTIONS

- **Qwik — merged framework contributions:** Fixed custom library entry-point handling in the Vite optimizer plugin, enabling libraries with multiple submodules (PR #6178). Updated Qwik's Supabase auth helpers and integration dependencies (PR #4745).
- **qwik-sonner — creator & maintainer:** Published a toast library with styled and headless APIs; about **56K npm downloads in the past 12 months** (October 2026). Fixed WebKit resumability, added native Popover API support, and shipped the Qwik v2 beta. Source · Documentation
- **qwik-date — creator & maintainer:** Rebuilt the calendar library for Qwik v2 and shipped it as the 2.0 beta (October 2026): range and multiple-date selection, a headless entry point, any locale through Intl, zero runtime dependencies, and 117 Vitest/Playwright tests on Chromium and WebKit. EXPERIENCE

Sancrisoft — Senior Full Stack Developer

2025–Present · Remote, US company & clients

- **Echo — sole engineer:** Built and publicly released a macOS meeting recorder in Swift/SwiftUI that the company uses for its own meetings: 15 releases since June 2026, including the 0.1.0 rebuild with call detection for Zoom, Teams, Meet, and Slack, full-text transcript search, and live summary progress. Source
- **Echo — on-device AI & architecture:** Records the microphone and system audio as separate streams through Core Audio process taps, transcribes with Parakeet on Core ML, and summarizes with Qwen through MLX, with nothing leaving the Mac. Structured as 12 Swift packages with 1,339 automated tests and GitHub Actions releases.
- **PMG — Engineered for Impact campaign:** Part of the team that built pmg.com/engineered-for-impact, the Astro/Contentful hub for PMG's 2026 brand campaign, promoted by full-page ads in **The Wall Street Journal**. Delivered ~30 PRs: the CMS-driven header and footer, campaign content blocks, subscribe and contact flows, multi-theme article routing, and the print vanity and QR-code redirects with UTM tracking.
- **PMG Hub — performance:** Cut search-page first-load JavaScript from **327 kB to 165 kB** by removing the Contentful SDK from the browser bundle and eliminating a redundant API request.
- **PMG Hub — product & architecture:** Built the recordings module with Contentful data fetching, category navigation, detail pages, pagination, and ISR. Extracted reusable content-block rendering and enabled editor-curated announcement ordering through GraphQL.
- **PMG & Momentum hubs — platform:** Migrated both hubs from Google sign-in to Okta; upgraded Momentum to Next.js 15 and modernized pnpm/dependencies across both. Fixed session/hydration failures, form routing, and embedded-content lifecycle issues.

- **PMG websites — rendering & routing:** Implemented request-scoped preview with AsyncLocalStorage and Vercel ISR cache bypass to isolate unpublished content. Added EMEA content targeting through Vercel geolocation middleware and corrected localized canonical URLs and redirect loops.
- **Sancrisoft website & PWRL:** Delivered the corporate website redesign and client marketing features with Next.js App Router, React Server Components, typed GraphQL, Strapi/Contentful, and HubSpot. Designed CMS schemas and improved SEO and performance to **90+ PageSpeed scores**.

CreatorSnap.ai — Frontend Engineer (Contract)

2026 · Remote, US team

- Built the thumbnail-generation experience with React and TanStack Start: conversational composition, reference uploads, reusable personas, and a mask/inpainting editor for targeted image regeneration.
- Implemented server functions for authentication, access/HttpOnly refresh cookies, and session renewal; integrated separate authentication, generation, and payment services with typed validation.
- Delivered credit balances, live generation quotes, Stripe Checkout top-ups, subscription billing interfaces, onboarding, and the product's website redesign; designed and shipped the app redesign.

Viewstats — Software Engineer

2024–2025 · Remote, US team

- Led the React/TypeScript/Storybook design system, **reducing feature development time by 40%** through reusable, polymorphic components.
- Migrated the Next.js project from Webpack to Turbopack and replaced incompatible plugins, **reducing build times by 45%**.
- Upgraded the React Native/Expo application and adopted the new architecture, **making app loading 20× faster**, and replaced outdated dependencies with native modules.
- Built internal tools with URL-persisted state and TanStack Query caching; established automated testing, CI/CD, linting, private-package releases, and production monitoring.

Energías Naturales SpA — Full Stack Developer

2023–2024 · 2026 redesign engagement · Remote, Chile team

- Built solar-commerce and customer workflows with Next.js, serverless Hono/Deno APIs, MongoDB, and Sanity/GROQ: catalog, cart, checkout, solar project calculations, and role-based administration.
- Implemented three direct payment methods with payment-link generation and validation, alongside Stripe-backed commerce; deployed a pnpm monorepo across Vercel, Deno Deploy, Cloudflare, and Sanity Hosting.
- Delivered the 2026 SolarVolt revamp with Next.js App Router: shared brand components, authentication pages, calculator/financing API integration, canonical URLs, and structured data.
- Migrated MongoDB Atlas Data API usage to the native Node.js driver, moved quote/payment handlers from Edge to Node.js, and reused connection pools across serverless invocations.

TECHNICAL SKILLS

- **Web & frameworks:** TypeScript, JavaScript, React, Next.js, React Server Components, SSR/ISR, HTML, CSS, TanStack Start/Router/Query, Astro, Qwik, React Native, Tailwind CSS, Storybook.
- **Backend & data:** Node.js, Bun, Express, Hono, PostgreSQL, MongoDB, Supabase, Drizzle ORM, REST, GraphQL, Stripe, OAuth/OIDC integrations, Strapi, Contentful, Sanity.
- **macOS & on-device AI:** Swift, SwiftUI, Core Audio, Core ML, MLX, Swift Package Manager.
- **Tooling & delivery:** Vite, Turbopack, GitHub Actions, CI/CD, Playwright, Vitest, Docker, Vercel, Cloudflare, pnpm monorepos, npm package publishing.
